

Fractal Harmonic Field Theory - Page 49: Cyclonic Entropy Dark Matter as the Skeleton of Recursive Flow

This page introduces a radical synthesis: entropy behaves like lightning, space like water, and dark matter may be the invisible conductor the scaffolding for recursive flow.

1. Space as Fluid:

Space is not static. It bends, refracts, and flows behaving like a fluid medium. General relativity supports this; brings texture to its flow.

2. Entropy as Lightning:

Entropy does not flow linearly. It leaps, arcs, and splashes. In high gradients, entropy discharges as light, radiation, or force behaving like electrical breakdown in a storm.

3. Dark Matter as the Conductor:

Dark matter doesn't shine, but it bends light and clusters mass. In theory, it may be the recursive skeleton that:

Structures gradients

Funnels entropic flow

Guides lightning splashes of entropy

4. Cyclonic Geometry:

may swirl like a cyclone:

Low-entropy core = center of rotation

Spiral gradients = entropy inflow

Radiation = harmonic discharge at the edges

5. Observable Signatures:

Galactic rotation curves align with this recursive structure

Gravitational lensing mimics vortex refraction

Radiation splashes may trace cyclone-like turbulence

Conclusion:

Dark matter may not be made of particles it may be the harmonic infrastructure of recursion itself. A cyclonic vortex of entropy, invisible but real, guiding the splash of light across the spacetime sea.
